Banking Data Platforms and Data Readiness

Trusted data for decisions, automation and AI

RealSoft connects banking systems, prepares reliable datasets and establishes governed data platforms that make information easier to use across the enterprise.

Dependable information

Consistent data and definitions for reporting and decision support.

Less manual preparation

Reusable integration and preparation capabilities across priority sources.

Readiness for growth

A scalable foundation for analytics, operational automation and AI.

Make data dependable and usable

Enable more consistent reporting, less repeated preparation and a clearer path to automation and AI.

A connected data foundation

Architecture shaped around existing systems and business priorities

Integration, preparation, quality and governance work together to turn distributed banking data into usable data products.

Acquire

Batch ETL/ELT
APIs
CDC where justified

→

Store and model

Raw / staging
Curated structures
Subject data marts

→

Consume

Reporting and BI
Operational interfaces
Analytics and AI

QUALITY / METADATA / LINEAGE / SECURITY / OWNERSHIP

Integration and engineering

ETL/ELT, approved APIs, source mappings and synchronization.

Quality and governance

Validation, reconciliation, metadata, lineage and ownership.

Data products and analytics

Curated warehouse structures, data marts and governed consumption.
